Supplementary Figure 1. Histamine content of BMMC-F at 4-5 weeks old, RBL-2H3-b at passage < 11 and, MC/9 at 4-5 weeks post-thaw. One hundred thousand cells were lysed in Triton X-100 and analyzed for total histamine content. N-3.

Supplementary figure 2. Routine mycoplasma checks reveal that RBL-2H3 cell lines are free of contamination. Unrelated samples are labeled as UR.
