DESIGN OF A 214 MC. YAGI FOR C.S.C.

Altering the operating frequency of C.S.C. from 200 mc. to 214 mc. involved considerable change in physical dimensions of the antenna. An attempt was also made to improve the radiation pattern and matching circuit.

1. Dimensions:

The same relative dimensions with respect to wave length proved satisfactory, and the overall length and position of braces and fittings were altered to maintain symmetry. (See drawing of complete antenna, Dwgs. 122 & 123.) The length and position of the elements are:

One radiator - see Dwg. 119 of folded dipole

One reflector - 3/16" dia. - 70 cm. long - 35 cm. behind radiator.

Two reflectors - 3/16" dia. - 70 cm. long - 35 cm. above and below radiator.

Ten directors - 3/16" dia. - 59 cm. long, spaced 47.5 cm.

2. Matching Yagi to 70 chm Coaxial

The original 200 mc. feeder system, using a SW-1C Yagi, 3/8" trombone filled with polystyrene beads, and 100 feet of V.J. Andrews 5/8" soft drawn coaxial cable, gave a power efficiency of 40%. Part of this loss could be traced to the use of a trombone perhaps 50% too long due to the polystyrene insulation, and part to the impedance match.

Any attempt to match the Yagi to a 70 ohm open wire line using a simple dipole radiator was unsatisfactory, due to the extremely low array impedance. Hence a folded dipole was used, and by varying the length an impedance of 140 ohms pure resistance was obtained. This arrangement was fed through the 70 ohm 5/8" coaxial line and a 100 ohm coaxial transformer in a quarter wave balancing sleeve. (The sleeve as used in experiments is shown in Dwg. 120. A suggested design for manufacture

is given in Dwg. 121.)

The match was checked using a length of 70 ohm slotted pipe and a thermocouple milliammeter. A standing wave ratio of 1.35 to 1 was obtained at 214 mc. Experiments proved the advisability of completely insulating the sleeve from the central metal support of the Yagi. Results of measurements on efficiency are as follows:

Sleeve completely insulated Relative Voltage Efficiency 100%

Grounded to frame at coaxial end 94%

Completely bonded to frame 88%

In addition, field strength patterns taken with the sleeve grounded in any way show a distinct distortion. The horizontal pattern with sleeve insulated is given in Dwg. 111, and those with sleeve grounded at one end and completely grounded in Dwgs. 117 and 118 respectively.

As opposed to the 40% power efficiency of the former feeder system, the redesigned feeder system appears to have very small losses.

3. Rediation Patterns

Horizontal and vertical radiation patterns of the final design (Dwgs. 111 & 112) indicated a forward-to-back ratio of better than 8 to 1. It was felt that variations in frequency would occur in practice, so horizontal radiation patterns for frequencies of 206, 210 and 218 me. are given in Dwgs. 113, 114 and 115, respectively. In addition, the variation in standing wave ratio in the coaxial line has been plotted in Dwg. 116 over a large frequency range.

4. Conclusion

Both the folded dipole and the quarter wave sleeve offer a simpler and stronger mechanical construction than the previous feeder system. The array is quite satisfactorily matched and is not seriously affected by variation in frequency from 208 to 216 mc.

Time did not permit a thorough investigation of the effects of bonding the elements to the central metallic support, but no serious loss in efficiency was apparent.

5. List of Drawings:

Dwg. #111 - Yagi Horizontal Pattern at 214 mc.

#112 - Yagi Vertical Pattern at 214 mc.

#113 - Yagi Horizontal Pattern at 206 mc.

#114 - Yagi Horizontal Pattern at 210 mc.

#115 - Yagi Horizontal Pattern at 218 mc.

#116 - Variation with Frequency of Standing Wave Ratio in Coaxial Line.

#117 - Horizontal Pattern with Sleeve Grounded at Coaxial Line End - 214 mc.

#118 - Horizontal Pattern with Sleeve Completely Bonded to Frame - 214 mc.

#119 - Detail of Folded Dipole for 214 mc. Yagi.

#120 - Construction of Coaxial Sleeve.

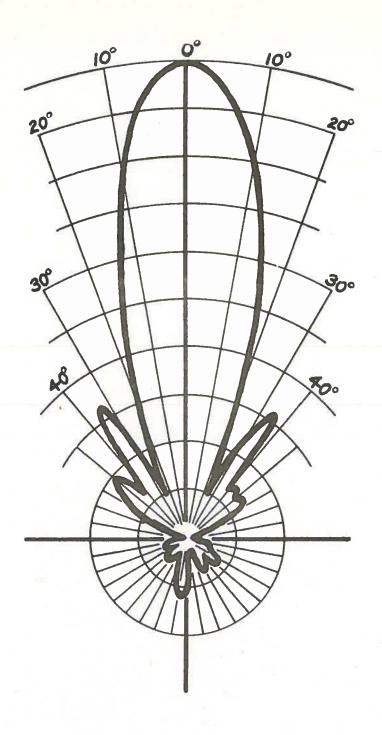

#121 - Proposed Design of Balancing Sleeve.

#122 - 214 Megacycle Yagi.

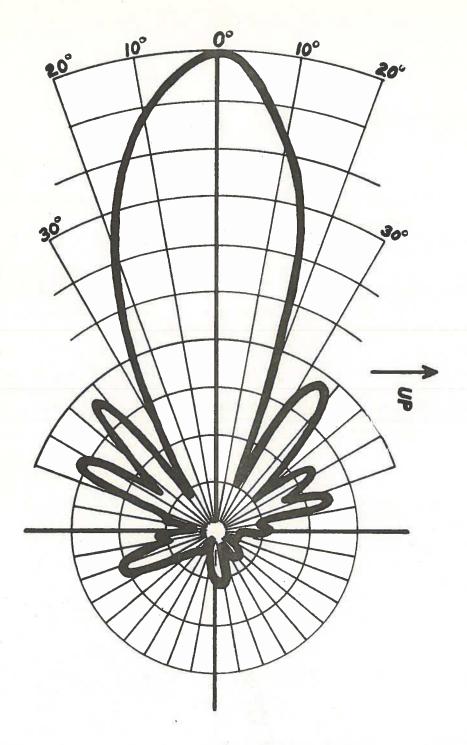

#123 - Pipe Support Detail.
